Clay Loam

Sandy Loam

Clay Loam

Shallow medium/heavy clay-  
yellowish brown (10 YR  
5/6) to brownish yellow  
(10 YR 6/6) on\* bedrock.  
Duplex.

A1 - shallow sandy loam-  
Black (5 YR 2/1)  
A2 - sand-light grey/grey  
(10 YR 6/1) on bedrock.  
Uniform.

Deep medium clay - Brownish  
yellow (10 YR 6/6) with a  
light grey (10 YR 7/2) mottle.  
Duplex.

LUNE RIVER LIMESTONE

This land system occurs on Ordovician limestone and associated siltsone and sandstone, inland from Lune River on the lower slopes of Moonlight Ridge.

Upper slopes (>300 m A.S.L.) contain a shallow (0.50 m), duplex soil with a clay loam surface over a yellowish brown clay developed on bedrock. This supports an open forest to tall open forest dominated by *Eucalyptus delegatensis* with an understorey that includes *Bedfordia salicina*, *Lepidosperma elatius*, *Goodenia ovata*, *Notelaea ligustrina*, *Leptospermum scoparium*, *Drymophila cyanocarpa*, *Gahnia grandis*, *Acacia verticillata*, *Pomaderris apetala* and *Acacia riceana*.

Exposed lower slopes have a shallow (0.35 m), sandyloam surface over a light grey to grey sand. This supports an open to tall open forest dominated by *Eucalyptus obliqua* with an understorey that includes *Gahnia grandis*, *Atherosperma moschatum*, *Phebalium squameum*, *Beyeria viscosa*, *Monotoca glauca*, *Pteridium esculentum*, *Acacia verticillata*, *Eucryphia lucida* and *Pomaderris apetala*,

Protected lower slopes contain a deep (>1.40 m), duplex soil with a clay loam surface over a brownish yellow clay that often has a light grey mottle. This supports an open to tall open forest dominated by *Eucalyptus obliqua* and *Eucalyptus regnans* with a rainforest understorey that includes *Nothofagus cunninghantii*, *Melaleuca squarrosa*, *Acacia melanoxylon*, *Atherosperma moschatum*, *Pomaderris apetala*, *Dicksonia antarctica*, *Olearia argophylla*, *Monotoca glauca*, *Coprosma quadrifida*, *Phebalium squameum*, *Blechnum wattsii* and *Anopterus glandulosus*.

Major land uses include caving, limestone quarrying, nature conservation and forestry. The karst country in this land system contains caverns and underground streams. Special management policies, may be required to avoid degradation of these features.
